

Treasury Metals Files PEA Technical Report for Goliath Gold Complex

TORONTO, March 11, 2021 – Treasury Metals Inc. (TSX: TML) (“Treasury” or the “Company”) is pleased to announce that it has filed on SEDAR the NI 43-101 Preliminary Economic Assessment Technical Report for the Goliath Gold Complex (the “PEA”), located near Dryden in northwestern Ontario. The results of the PEA were previously announced in the Company's news release dated February 2, 2021. A copy of the PEA is also located on the Goliath Gold Complex's Technical Reports page of the Company's website.

Highlights of the PEA are (all currencies are reported in Canadian dollars unless otherwise specified):

- Low capital intensity project with pre-production capital cost of \$233 million and pre-tax payback period of less than 2 years
- Robust economics with post-tax \$328 million NPV_{5%}; IRR of 30.2% at US\$1,600 per ounce of gold
- Mine life of 13 years, with average annual gold production during first 9 years of 102,000 ounces and total LOM recovered gold of ~1.1 million ounces
- World-class infrastructure includes existing hydro power, natural gas and CP rail lines, plus Trans-Canada Highway

The full Report compiled by Ausenco Engineering Canada Inc. and dated March 10, 2021 entitled, “N.I. 43-101 Technical Report & Preliminary Economic Assessment of the Goliath Gold Complex,” which set out key assumptions, parameters and methods used, can be found on the Company's website at www.treasuremetals.com and on SEDAR under the Company's issuer profile at www.sedar.com.

The Company would also like to make a minor correction to the February 2, 2021 press release for a typographical error presented in the resource tables. The Measured Underground grade was incorrectly stated as 4.84 g/t Au and is corrected to 4.94 g/t Au. The Inferred Goliath Open Pit tonnes were stated at 5.644 million tonnes and are corrected to 3.644 million tonnes.

Cautionary statement required by NI 43-101

According to the cautionary statement required by NI 43-101, it should be noted that this assessment is preliminary in nature, includes Inferred Mineral Resources that are considered too speculative geologically to have the economic considerations applied to them that would enable them to be categorized as mineral reserves, and there is no certainty that the preliminary assessment and economics will be realized. Mineral resources that are not mineral reserves do not have demonstrated economic viability.
